

USWAP

BY THE PEOPLE • FOR THE PEOPLE

WHITE PAPER V.1.0

This White Paper includes qualitative and quantitative data for the USWAP project, represented by EclipCity. It includes all data, graphs, references and empirical observations to conclude this business model.

TABLE OF CONTENTS:

INTRODUCTION TO USWAP DEX

USwap is a modified and improved version of the UniSwap v2 project launched on the TRON network by our Eclipcity team. DeFi is constantly evolving and according to qualitative data¹, users today prefer to place their trust in decentralized platforms rather than centralized exchanges and dapps which pose challenges such as security and hacking. DeFi is the fastest growing industry on Blockchain² and we are only at the beginning.

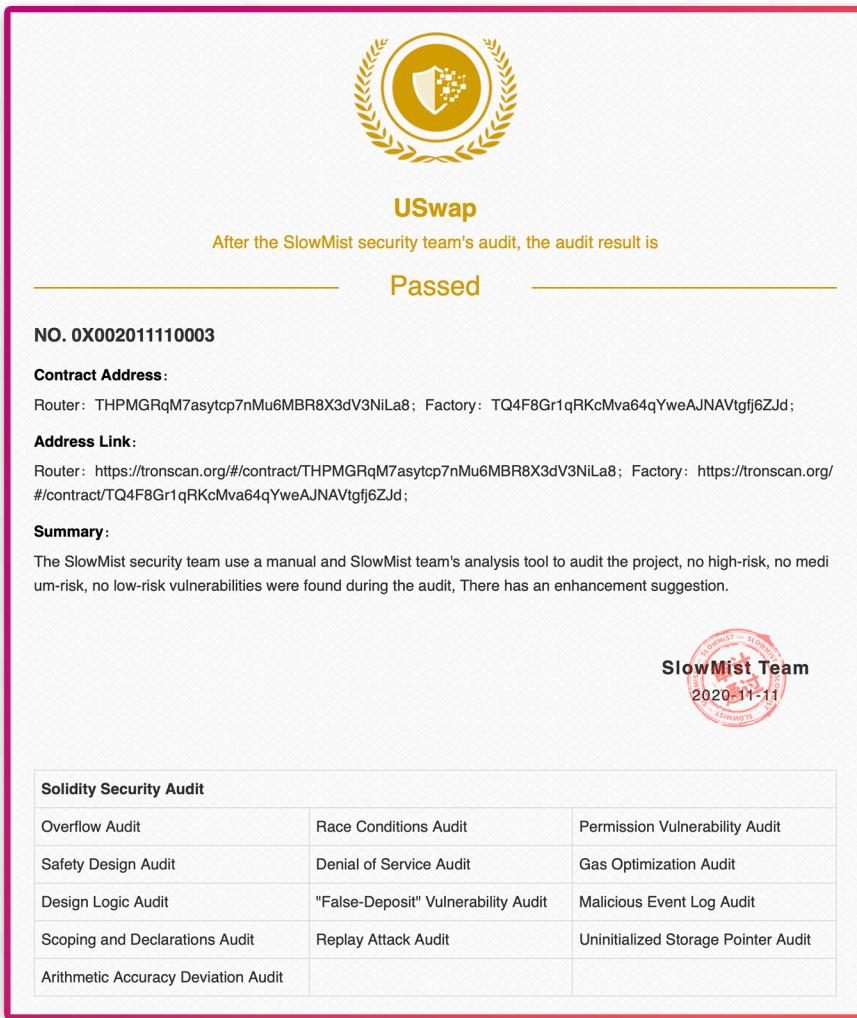

USwap is unique and differs from other DEX projects as it has a whitelist audit that tokens and projects need to pass before allowing the listing on USwap. USwap DEX works only with tokens verified and audited by our EclipCity team, for which the community votes through UME token holdings which ensures the safety and security to our users and brings back the trust for DEX token projects on the TRON network. We aim to be the leading DEX for the people, and we have grown exponentially since the start of our project.

We have designed a decentralized exchange with our users in mind, With the phrase “simplicity is the ultimate sophistication” we present to you the USwap DEX!

WHAT IS USWAP DEX?

USwap is the leading Decentralized Exchange (DEX) powered by the TRON network. A simple exchange solution with an intuitive UI that is easy to understand and use. It is Smart Contract based, verified (audited code)³ and is completely safe as a result.

SlowMist certified approval⁴

0.3% of the exchange token fees are distributed amongst liquidity providers to incentivise participants on providing liquidity to the USwap exchange.

WHAT IS THE UME TOKEN?

At the heart of USwap lies the UME token, the proprietary token of the USwap DEX, giving our clients various options of generating revenue. Additionally, UME is the official Governance token of the USwap DEX and will be used for future projects as this will govern the direction of the USwap DEX which is completely community driven! UME is the gateway token for all USwap services and upcoming features.

This token has been designed to give holders maximum value with an array of use cases, both current and future. Holders will appreciate this value which is outlined below:

- ◆ 23 million total supply - UME has a limited total supply of 23 million tokens and this number will never increase. The UME emissions rate (mining speed) is adjustable and is adjusted according to market requirements and demand. There is no set date for farming completion
- ◆ 100% of the supply will be mined over time (released through mining pools) and no tokens were reserved for team members which simply means, even Eclipcity employees must obtain UME through mining
- ◆ Critical for EFT mining – The EFT token is your key to all things Eclipcity and can be bought
- ◆ Essential for access to a number of Eclipcity DeFi Services
- ◆ Multiple use cases (Farming, Governance, and Gaming etc.)
- ◆ Exclusive benefits for holders through USwap DEX
- ◆ Utility use case in Eclipcity mobile gaming

STATISTICS AND FIGURES

Below represents the most recent figures (December 2020) recorded on our database by our statistical analysts and external resources.⁵

Figures 1 and 2 represent the overall users, transactions and total volume since launch to date (Dec 2020). The growth has been phenomenal in only 30 days and we project substantial further growth in the coming months.

UME FINANCE

Ume Finance is our official farming portal for the proprietary governance token UME on the USwap DEX. Users are able to stake a number of LP tokens provided by Uswap DEX when providing liquidity to selected pairs, effectively earning UME proportionate to the value staked. Two assets are required in equal amounts (50/50) to add liquidity to USwap and to begin staking the LP tokens at ume.finance.

- ◆ 3% staking fee on pool entry
- ◆ 1% of fee used to purchase UME directly via market buybacks
- ◆ 2% of fee used for project stability, future development and further progress in the Eclipcity ecosystem
- ◆ Buybacks are completely random to prevent market manipulation
- ◆ Mining output (staking rewards) are adjustable and is revised according to demand

Note: Farming through the USwap farming portal is the ideal way of earning UME tokens. The Eclipcity team recommends farming over the purchasing of UME tokens as it completely eliminates any kind of risk and you would effectively be receiving UME for free.

CONCLUSIONS

USwap & UME together as part of the Eclipcity ecosystem promises to be a game changer in the DeFi space. The release of the EFT and the demand this will drive for the UME token in the coming months will see returns far beyond industry average and we are certain that you will be a happy member of the Eclipcity family. While UME & EFT have no intrinsic value, the value lies in the potential profits and revenue that will be generated by the Eclipcity ecosystem.

DISCLAIMER

This Whitepaper was created by EclipCity for the use of information dissemination for the broad public and related parties. The contents herein may not be copied, edited, sold, or distributed under another name and EclipCity holds full copyrights. Information and content contained herein is subject to change without prior notice. The UME token is not a share or equity and is a Governance token which has no monetary financial value.
